

“Tracking systems providing integration, compliance, stewardship and reliability.”

WE MOVE OUR TECHNOLOGY FORWARD,
JUST SO WE END UP BACK AT SQUARE ONE.

MEETING FEDERAL STANDARDS:

- Tamper Proof Fill Lid
- Tracking Labels
- Check Controlled Ball Valve

Meeting the 2011 Rule Compliance Requirements

Container Recordkeeping Process Overview

SecureTracs is a world-class container tracking software system. Using bar coding/RFID technology, SecureTracs integrates service focused on asset tracking and federally regulated product traceability. The usage of our software, scanners/readers and labels will allow real-time tracking of DOT and EPA certification requirements online. We have products for use in the fields of agriculture, bulk transport of chemicals or other liquid products and container suppliers or reconditioners. To meet the needs of your company at a price level and integration you choose, each product comes with one of three service level plans. Be assured all levels meet our high standards of reliability, simplicity and cost effectiveness.

Bar Code/RFID Tags are attached to each reusable container or other asset. When labels or tags are scanned they transmit data at 3 to 5 minutes intervals (interval times can be set to individual needs). A network of Tracking Access Points (TAP) detects each tag transmission and forwards it to a server, which determines the location of the asset. In addition to finding tagged containers within a facility, TAP also serve as standard devices for supporting mobile GPRS devices. SecureTracs combines correct asset location information with traditional inventory and resource management data, establishing a new standard for business critical information.

Resources Management Systems

Internet Web browser provides access to information from back office through the Internet. Traditional container management processes such as bar-coding and short-range RFID require direct line of sight between the label and scanning device. Our RFID systems provide correct asset location on a continuous basis, regardless of the asset's location.

- **Simple and Powerful Configuration:** Allows you to define custom fields, labels and data-types for tracking asset data
- **Streamlined Data Collection:** Collect asset data quickly and easily with our plug and play GRPS/RFID or Bar Code Readers
- **Affordable:** Track an unlimited number of assets very cost-effectively
- **Simple Integration:** At the Enterprise level of programming, SecureTracs seamlessly integrates with existing programs.
- **Data Import:** Import data on demand or as a scheduled event.

- **Data Export:** Export data to Excel or text format directly from your web browser
- **Configurable Data Validation:** Specify rules for fields to ensure valid transactions and accurate data
- **Unlimited Asset Counts/Processes:** Track an unlimited number of assets and IMAC processes as required by your organization
- **Security:** Control access to asset information and administrative functions via a simple web interface
- **History Tracking:** View entire lifecycle history of an asset quickly

Record Keeping Capabilities

Real-time container visibility allows for lower container loss factors and thus lower container purchases. Container utilization by container type can be monitored to determine a variety of statistics:

- Number of turns
- Time in use
- Keeps track of inventory history
- Provides for container searches by status, type and content
- Provides exact container location and count
- Total asset/container/material visibility
- Links individual containers with their contents
- Keeps track of container history

Standard Reports

View detailed reports on your entire fleet of containers or assets. Generate costing, freight, and maintenance reports. Receive real time and end of day reports. Run automated email reports.

- Receiving Report
- Unregistered Container Receiving Report
- Receiving Scan Screen
- Inventory Report
- Physical Inventory Report
- Inventory/Site Floor Plan
- Work In Progress Report
- UN/DOT Recertification Report
- Pick and Ship Report
- Billing Report
- Alerts and Emailing Setups
- Key Performance Indicators Report
 - Outbound Containers Shipped to a Customer within defined dates.
 - Inbound Containers Received by a Customer within defined dates.
 - Returns of Unregistered Containers in defined date
 - As a percentage of returned containers in defined date
 - Containers returned damaged by customer in defined date
 - Residue Returned by customer in defined date
 - Containers picked up per customer

Container Labeling

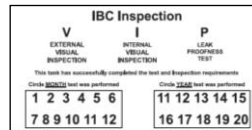

Developed with our customer in mind, the EPA Compliant tracking and labeling systems meet the latest Federal EPA and DOT ruling. Our tracking labels design meets and has approval by EPA 2011 PCC standards. They have visible serialized sequence numbering with code 125 double bar coding or 915 mhz RFID with visible numbering. We also carry all your DOT labels for the IBCs. These labels have a six year wear plan and have been tested and proven in industrial container washing applications. Combine these IBCs with the IBC Tracker system and you will comply with the first and only IBC Program to fully meet with all Federal DOT and EPA regulations.

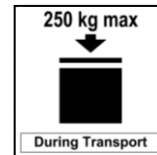

Custom Bar Code or RFID Labels

Generic Bar Code or RFID Labels

IBC Inspection Label

IBC Stacking Label

EPA and DOT Container Compliance and Responsibility

Combining superior technology and containers and surpassing the new EPA compliance standards, **Secure Tracs** offers exceptional customer value, enables reduction in customer product cross contamination, and creates an environmentally sustainable solution at an unparalleled saving to any other container management program in the world.

Secure Locating Technologies Inc. is headquartered in Minneapolis, MN with offices in Rake, IA. We cater to Industrial operations where remote exact locating of your assets is needed for security, safety and regulatory compliance. The owners of SecureTracs are pleased to have this opportunity to earn your business.

We can be reached at 855-SEC-TRAX or through our web site at www.securetracs.com.
